NEWS RELEASE

Stina Signs Product Distribution Agreement with America Greener Technologies, Inc. and AGT Soft Wave, Inc. for the Distribution of Soft Wave Technology

Stina Resources Ltd. (the “**Company**”) is pleased to announce that it has entered into a product distribution agreement among America Greener Technologies Inc. and AGT Soft Wave, Inc. (collectively, the “**Manufacturer**”) for the non-exclusive Canadian distribution rights for the Manufacturer’s water treatment technology, Soft Wave (the “**Soft Wave Technology**”) in exchange for a one-time payment of CDN\$25,000 and a 12% royalty of all Soft Wave Technology distributed and sold within Canada.

The Company has also acquired the option to purchase exclusive Canadian distribution rights to Soft Wave Technology from the Manufacturer for an aggregate sum of CDN \$250,000 upon the Company reaching certain gross revenue thresholds. The agreement is subject to CSE approval and the Company will release further details as they develop.

About Soft Wave

Soft Wave is a non-chemical water treatment system that provides a number of cost-saving, environmental, and personal benefits to household consumers, businesses, city water infrastructures, and large industrial operations. Soft Wave dissolves and suspends minerals in the water, thus preventing scale formation inside the pipes and the elimination of prior scaling. Soft Wave technology has been in development for over six years and has been commercially available in the U.S. for the past three years. During that time, Soft Wave has been installed in such locations as Dole Foods, Fresh Express and Best Western Hotels, in addition to a number of other well-known companies throughout North America.

Soft Wave is completely scalable and works as well in homes as it does in power plants. Benefits include a reduction or elimination of all chemical additives in your water system, elimination of calcium and mineral deposits, reduced maintenance or replacement costs of your system, and significant cost savings while reducing environmental footprints.

Applying Soft Wave technology in industrial cooling tower operations reduces water evaporation, eliminates the need for chemical cleaning and will normally lead to increased cycles. These factors combine to decrease the required makeup water, and decrease the blow down water, thus saving millions of gallons of water and reducing the reliance on chemical treatment to prevent scaling, and reduce production downtime. This means potential large scale industrial cost savings through reduced wear and tear on components, reduced liability, reduced overhead, and increases in efficiency. Potential customers are numerous, from power plants, to refineries, steel factories, agricultural operations, food production plants, city water systems, and residential homes.

Stina is already preparing to test Soft Wave in several agricultural, industrial, and residential operations, as well as developing a full marketing plan with AGT for numerous Canadian end-users, through a number of channels focused on sales, leasing, and service contracts.

Company President James Corrigan expresses the Company’s excitement in “testing the waters” in a new area of environmental technology. “This may very well move Stina into a new undeveloped, and potentially unlimited opportunity in Canada. We look forward to working with America Greener and Soft Wave to develop this exciting new technology further, and introduce it to everyone in the country.”

The Company will provide further updates as developments and milestones occur.

On behalf of the Board of Directors,

James Corrigan
President/ Director
