NEWS RELEASE

Stina Installs First Soft Wave Unit at Hallmark

Stina Resources Ltd. (the “Company”) is pleased to announce it has completed its first Soft Wave water treatment system installation for Hallmark Poultry Processors in Vancouver, BC. The mid-sized commercial unit being used on the Hallmark water system was installed smoothly and the monitoring of water quality has begun. Pipe condensation, water flow and filter basket debris will be recorded and maintained over the next several weeks to determine the success of the Soft Wave unit and the overall impact it will have on their water system, from an increase in water cycles, to reductions in scaling.

Stina President James Corrigan, who oversaw the entire installation, was pleased with the process. "This is a very important installation for Stina, as it validates the impact Soft Wave has on water treatment in Canada. It opens a new, greener option for industry to treat water without the use of harmful chemicals. Stina looks forward to more installations in Canada as word spreads of the amazing benefits Soft Wave provides, and as the Company sources new opportunities".

The Company intends to install similar systems on more Hallmark processing facilities across the province where hard water has an even greater effect on scaling build up. Stina plans to pursue several large scale water users over the coming months to grow revenues and provide environmental solutions to industry. The progress and benefits for the Hallmark installation will be made available as warranted.

About Soft Wave

Soft Wave is a non-chemical water treatment system that provides a number of cost-saving, environmental, and personal benefits to household consumers, businesses, city water infrastructures, and large industrial operations. Soft Wave dissolves and suspends minerals in the water, thus preventing scale formation inside the pipes and the elimination of prior scaling. Soft Wave technology has been in development for over six years and has been commercially available in the U.S. for the past three years. During that time, Soft Wave has been installed in such locations as Dole Foods, Fresh Express and Best Western Hotels, in addition to a number of other well-known companies throughout North America.

Soft Wave is completely scalable and works as well in homes as it does in power plants. Benefits include a reduction or elimination of all chemical additives in your water system, elimination of calcium and mineral deposits, reduced maintenance or replacement costs of your system, and significant cost savings while reducing environmental footprints.

Applying Soft Wave technology in industrial cooling tower operations reduces water evaporation, eliminates the need for chemical cleaning and will normally lead to increased cycles. These factors combine to decrease the required makeup water, and decrease the blow down water, thus saving millions of gallons of water and reducing the reliance on chemical treatment to prevent scaling, and reduce production downtime. This means potential large scale industrial cost savings through reduced wear and tear on components, reduced liability, reduced overhead, and increases in efficiency. Potential customers are numerous, from power plants, to refineries, steel factories, agricultural operations, food production plants, city water systems, and residential homes.

On behalf of the Board of Directors,

James Corrigan
President/ Director
