NEWS RELEASE

Stina Concludes Field Work on the Bisoni McKay Vanadium Property

Stina Resources (CSE: SQA) reports that, further to its October 5, 2015 news release, the Company has concluded its field work on the Bisoni McKay vanadium property. The field work consisted of survey control on Northern Section A and review and re-organization of previous drilling samples for future bulk sampling. Results of this survey have been submitted to Maptek for resource re-calculation. This survey control is not expected to reflect any significant changes to the existing resource estimate.

The company has also started its review of the vanadium recovery studies initiated by Hazen in 2006-2007, and further reviewed by Lyntek in 2011. Results of this study will help outline the next phase of development for the property, primarily further advancement and refinement of the recovery. Edwin Bentzen, a metallurgist and an affiliate of Resource Development Inc. has been contracted to conduct this review.

The Company expects to conclude Phase II very promptly and file the updated NI 43-101 Technical Report, reflecting updated information, including any changes to the resource calculations in the near future. A news release will update shareholders at that time.

Ed Ullmer, P.Geo, CO is a designated Qualified Persons acting for the Company and assisted in the preparation of this news release. For further information, please call 1-800-882-3213 or visit www.stinaresources.com

On behalf of the Board of Directors,

James Corrigan
President/ Director
